Dear ,

Notice for a Product Safety Recall of MerCruiser Stern Drive Engines with Alpha & Bravo Intermediate Shift Cable - Serial No.

We at Mercury Marine are dedicated to providing superior reliability and customer satisfaction. As part of our commitment to superior customer satisfaction, we have determined that it may be necessary to replace the Intermediate Shift Cable of your MerCruiser engine to ensure the safety and reliability of your MerCruiser package.

What is the condition?

The intermediate shift cable connects the engine's remote throttle and shift control unit to the Stern Drive's gearshift mechanism.

It is possible that the core fitting of the intermediate shift cable will not remain attached to the core wire. If the core fitting is detached from the core wire, the operator will be unable to change gears (forward, neutral, reverse).

To avoid this occurring, replacement of the core wire of the intermediate shift cable should be scheduled and completed as soon as possible. The boat should not be operated until the repair has been completed

What will Mercury do?

Any authorised MerCruiser dealer will inspect and if necessary replace your Intermediate Shift Cable at no charge to you.

What should you do?

Please contact your MerCruiser dealer (preferably the selling dealer), to schedule an appointment to have the Intermediate Shift Cable inspected/replaced. Your dealer is able to determine how long the repair will take on your engine.

Please present this notice to your dealer when you bring your engine in for your service appointment.

What if you have other questions or no longer own this engine?

Please contact your Authorised dealer.

We have sent this notice in the interest of your continued satisfaction with our product and we sincerely regret any inconvenience this may cause you.

For your nearest dealer location please refer to our website www.mercurymarine.com.au,

Sincerely,

Marine Power International Pty Ltd
