

VOLUNTARY ELECTRICAL SAFETY RECALL

Powerleader Power board model L54185

**SUPPLY CORD
AND GROMMET**

Identification:

Potentially affected units were supplied between January 2016 and February 2017 and will be clearly marked on both the product and packaging with the model reference L54185 and the batch code JI12332. No other product or batch is affected by this recall.

Where the product was sold: National trade and wholesalers

Defect: in some cases, the supply flexible cord anchorage may not be adequate

Hazard:

The increased stress on the supply cord conductors could present the risk of electric shock

Action Required:

- Customers are to unplug any potentially affected units and check the cord anchorage by trying to push the supply flexible cord into the device at the cord entry point.
- If the cord is found to be securely anchored, no action needs to be taken.
- If the supply flexible cord can be moved through the grommet, please contact Powerleader on 02 9860 2782 or email support@powerleader.com.au to obtain a replacement unit free of charge.
- Discard the faulty power board.
- Any unopened units from this batch may also be returned for replacement by contacting Powerleader Support.
- If there are any queries relating to how to carry out testing, please contact Powerleader.
