

Marine Power International P/L

A.B.N. 25 003 100 007

BOAT SAFETY RECALL

Marine Power International Pty Ltd manufacturer Savage & Aluminium Fibreglass boats between October 1999 and December 2008 and Bermuda boats between January 2005 and December 2008.

We have become aware that certain Savage & Bermuda models with an underfloor fuel tank may have been fitted with incorrectly rated hoses running from the fuel tank to the fuel filter and from the fuel tank to the breather/vent.

It is possible that under some conditions these hoses could degrade. If this happens fuel could leak into the bilge of the boat leading to a risk of fire or explosion which could lead to severe injury or death to the operator, passengers or bystanders.

As a result of this, Marine Power International has implemented a voluntary product recall for the inspection and rectification of all affected boats.

The product recall affects persons who may own or use either:

- a Savage forward steer aluminium or fibreglass boat with an underfloor fuel tank that was manufactured between October 1999 and December 2007; or
- a Bermuda forward steer aluminium boat purchased with an underfloor fuel tank manufactured between January 2005 and December 2007.

In many cases, the date of manufacture will be displayed on the manufacturer's ID plate. If not, the year of manufacture is the last two digits of the serial number. Please note that boats with a portable fuel tank are **not** affected.

People with an affected boat should stop using it immediately. They should contact their nearest Mercury Marine Dealer who will arrange for the boat to be inspected and rectified at the expense of Marine Power International Pty Ltd.

For your nearest dealer location please refer to the website www.mercurymarine.com.au or call during business hours 1800 701 202 or email savage.recall@mercmarine.com.

See www.recalls.gov.au for Australian Product Recall Action.
