

Product Safety Recall

Roadsafe Soft Shackle Rope - spliced - 10mm - 9000kg breaking strain

Affected products have a label with batch code HYPI001578
and were sold from 21 June 2017 to 19 December 2017

Defect: The warning label attached to the product contains a typographical error.

The warning label contains the line 'A standard tow ball or vehicle tie-down point is 'now' designed for this purpose and may result in the strap or vehicle component detaching from a vehicle and striking and seriously injuring or killing a person.'

The actual wording should be: 'A standard tow ball or vehicle tie-down point is 'not' designed for this purpose and may result in the strap or vehicle component detaching from a vehicle and striking and seriously injuring or killing a person.'

Hazard: If the soft shackle is attached to an unsuitable anchor point such as a standard tow ball and used for vehicle recovery, the tow ball and recovery strap can shear and recoil at great force. This can pose a risk of injury or death to vehicle occupants or bystanders.

What to do: Consumers should return the product to the place of purchase where they will be provided with a full refund.
